

Mathematical Analysis Lecture 12. 高阶微分与微分中值定理.

e.g. $\lim_{\Delta x \rightarrow 0} \frac{f(x_0 + \Delta x + \Delta x^2) - f(x_0)}{\Delta x} = \lim_{\Delta x \rightarrow 0} \left(\frac{f(x_0 + \Delta x + \Delta x^2) - f(x_0)}{\Delta x + \Delta x^2} \cdot \frac{\Delta x + \Delta x^2}{\Delta x} \right) = f'(x_0).$

e.g. 设 $f(x) = \begin{cases} x^2 \sin \frac{1}{x}, & x \neq 0 \\ 0, & x = 0 \end{cases}$, 讨论 $f(x)$ 在 $x=0$ 处的连续性与可导性.

$\lim_{x \rightarrow 0} x^2 \sin \frac{1}{x} = 0 = f(0)$ 所以 $f(x)$ 在 $x=0$ 处连续. $\lim_{x \rightarrow 0} \frac{f(x) - f(0)}{x - 0} = \lim_{x \rightarrow 0} x \sin \frac{1}{x} = 0$.

所以 $f(x)$ 在 $x=0$ 处连续且可导, 且导数值为 0.

→ 高阶导数与高阶微分.

若 $y=f(x)$ 的导函数 $y'=f'(x)$ 可导, 则称 $f(x)$ 的导数为二阶导数, 记作 y'' , $\frac{d^2 y}{dx^2}$.

以此类推可以得到 n 阶导数.

e.g. 设 $y = a_0 + a_1 x + \dots + a_n x^n$ $\therefore y^{(n)} = a_n \cdot n!$

e.g. 设 $y = \ln(x+1)$, $y^{(n)} = \frac{(-1)^{n-1} (n-1)!}{(x+1)^n}$ 定义 $0! = 1$

e.g. 设 $y = \sin x$, $y' = \cos x = \sin(x + \frac{\pi}{2})$ $y'' = \cos(x + \frac{\pi}{2}) = \sin(x + \pi) \dots$

$\therefore y^{(n)} = \sin(x + \frac{\pi}{2} \cdot n)$, 可直接用.

e.g. 求 $y = \sin^b x + \cos^b x$ 的 n 阶导数 由于 $a^3 + b^3 = (a+b)(a^2 - ab + b^2)$.

$\therefore \sin^b x + \cos^b x = (\sin^2 x + \cos^2 x)(\sin^4 x + \cos^4 x + 2\sin^2 x \cos^2 x - 3\sin^2 x \cos^2 x) = 1 - \frac{3}{4} \sin^2 2x = \frac{5}{8} + \frac{3}{8} \cos 4x$.

$\therefore y^{(n)} = \frac{3}{8} \cdot 4^n \cdot \cos(4x + \frac{\pi}{2} n)$.

运算法则: $(u \pm v)^{(n)} = u^{(n)} \pm v^{(n)}$.

Leibniz公式 $(uv)^{(n)} = u^{(n)} v + n u^{(n-1)} v' + \frac{n(n-1)}{2!} u^{(n-2)} v'' + \dots + \frac{n(n-1)\dots(n-k+1)}{k!} u^{(n-k)} v^{(k)} + \dots + uv^{(n)}$

规律 $(uv)' = u'v + uv'$
 $(uv)'' = (u'v + uv')' = u''v + 2u'v' + v''$
 $(uv)^{(n)} = \sum_{k=0}^n C_n^k u^{(n-k)} v^{(k)}$

e.g. $y = x^2 e^{2x}$, 求 $y^{(20)}$ $\sim y^{(20)} = 2^{20} e^{2x} x^2 + 20 \cdot 2^{19} e^{2x} \cdot 2x + 20 \cdot 19 \cdot 2^{18} e^{2x}$

e.g. $y = \arctan x$, 求 $y^{(n)}(0)$ 即 $(1+x^2)y' = 1$.

即 $(1+x^2)y^{(n+1)} + 2nx \cdot y^{(n)} + 2y^{(n-1)} = \frac{n(n-1)}{2!}$

比如: $dx^2, d(x^2), d^2 x$.
